Roseda Farm

These genetics represent the pinnacle of the Roseda breeding program. We have spent 22 years selecting and breeding cattle that work for all facets of the beef industry. We have to because every day our genetics are tested by our commercial cow-calf customers, in our custom feed yards, at our packing plant and as a branded Angus Beef product in retail stores and in the food service industry. Our name is on the product at every step along the way.

If you use these donors' CED, YR and Marb EPDs in a sort of active dams, there are no others that match what they do in meeting the basic needs of the beef industry for calving ease, growth and carcass quality. In terms of maternal ability, their Milk EPDs fall within an acceptable range, and the Blackcap cow family is among the most productive at Roseda Farm.

The next generation is D118's first bull calf, Roseda Peyton F091, with a combination of EPDs that are poised to have a great impact on the Angus breed. Study him in any combination of traits you desire, and you will be hard pressed to find another that can do what he does.

Contact us or visit our website for additional information.
